Equipment service needs

CAUTION

The products described in this document are NOT designed for nuclear-qualified applications. Using non-nuclear qualified products in applications that require nuclear-qualified hardware or products may cause inaccurate readings.

For information on Rosemount nuclear-qualified products, contact your local Emerson Process Management Representative.

This device is intended for use in temperature monitoring applications and should not be used in control and safety applications.

USING THIS MANUAL
This product manual provides installation, configuration, calibration, troubleshooting, and maintenance instructions for the Rosemount 1595 Conditioning Orifice Plate.

Section 2: Installation

Appendix A: Reference Data

Appendix B: Installation Drawings

RECEIVING AND INSPECTION
Flowmeters are available in different models and with different options, so it is important to inspect and verify that the appropriate model was delivered before installation.

Upon receipt of the shipment, check the packing list against the material received and the purchase order. All items are tagged with a model number, serial number, and customer tag number. Report any damage to the carrier.

RETURNING THE PRODUCT
To expedite the return process, call the Rosemount National Response Center toll-free at 800-654-7768. This center, available 24 hours a day, will assist you with any needed information or materials.

The center will ask for the following information:

• Product model
• Serial numbers
• The last process material to which the product was exposed

The center will provide

• A Return Material Authorization (RMA) number
• Instructions and procedures that are necessary to return goods that were exposed to hazardous substances

NOTE
If a hazardous substance is identified, a Material Safety Data Sheet (MSDS), required by law to be available to people exposed to specific hazardous substances, must be included with the returned materials.
Section 2 Installation

SAFETY MESSAGES

Instructions and procedures in this section may require special precautions to ensure the safety of the personnel performing the operations. Please refer to the following safety messages before performing any operation in this section.

**WARNING**

Failure to follow these installation guidelines could result in death or serious injury:

- Make sure only qualified personnel perform the installation.
- Remove pressure and drain the pipe assembly prior to installing or removing the orifice plate.
- If the process fluid is caustic or otherwise hazardous, follow the instruction closely to prevent mishap.
Checklist

The following is a summary of the steps required to complete a 1595 installation.

If this is a new installation, begin with step 1.

If the mounting is already in place, verify that the orifice flange size and rating match the recommended specification and begin with step 5.

1. Determine where the 1595 is to be place within the piping system.
2. Establish the proper orientation as determined by the intended service for the orifice plate.
3. Orient the 1595 Conditioning Orifice Plate so the pressure taps are centered between any two (of four) orifice bore holes.
5. Confirm the 1595 configuration.
6. Measure the pipe’s internal diameter (I.D.), preferably at 1 x I.D. from the orifice flange (upstream or downstream).

NOTE
Providing the pipe’s I.D. at the time of purchasing the 1595 is necessary to maintain published orifice plate accuracy.

7. Install the orifice plate.
8. Check for leaks.
9. Commission the orifice plate.
LOCATION AND ORIENTATION

Horizontal Pipe Installation

The orifice plate electronics must be installed in the proper orientation relative to the pipe and the fluid measured.

OPERATING TEMPERATURE LIMITS

Temperature Range: -320 to 1200°F (-196 to 649°C)
-320 to 800°F (-196 to 427°C) and differential pressure up to 800 inH₂O.
800 to 1200°F (427 to 649°C) and differential pressure up to 400 inH₂O.

The following figures show paddle style conditioning orifice plate, but orientation pertains to both paddle and universal plate styles.

⚠️ Gas in Horizontal Pipes

The electronics should be mounted above the pipe to ensure that condensate does not collect on the transmitter sensing diaphragms. Orient the unit within the 120° recommended zone as shown in Figure 2-1.

⚠️ Liquid or Steam in Horizontal Pipes

The electronics should be mounted below the pipe to ensure that gases do not collect on the transmitter sensing diaphragms.

Figure 2-1. Gas in Horizontal Pipes

Figure 2-2. Steam in Horizontal Pipes
Figure 2-3. Liquid in Horizontal Pipes

**Vertical Pipe Installation**  
⚠️ Gas in Vertical Pipes

Mount the electronics above the pipe with the instrument lines sloping down.

Figure 2-4. Gas in Vertical Pipes
Liquid or Steam in Vertical Pipes

Mount the transmitter below the pipe with the instrument lines sloping up.

Figure 2-5. Liquid in Vertical Pipes

* Bring height of HI instrument line to the same height as LO instrument line before running down to the transmitter

Figure 2-6. Steam in Vertical Pipes
**1595 Straight Pipe Requirements**

Use the appropriate lengths of straight pipe upstream and downstream of the 1595 to minimize the effects of moderate flow disturbances in the pipe.

**Table 2-1. 1595 Straight Pipe Requirements (1) (2)**

**NOTE**
The Rosemount 1595 can be used with Rosemount 1496 Orifice Flange Unions and Rosemount 1497 Meter Sections. For product offering see document number 00813-0100-4792.
INSTALLATION

Rosemount 1595 Types:

Rosemount 1595P | Rosemount 1595U with Plate Holder (PH)

Rosemount 1496 Types:
1496 WN
1496 SO
1496 RJ

Step 1: Determine the Proper Orientation
See “Location and Orientation” on page 2-3.

Step 2: Weld the Flange Union.
Follow these steps to weld the orifice flanges to the pipe.
1. Depressurize the line using site-specific requirements
2. Prepare the pipe ends.
   a. For flanged models, ensure the pipe mounting flange is the same size or rating.
   a. For threaded models, ensure the pipe union or coupling is the same size pipe thread as the meter section
3. Ensure that the pipe mounting flange is the correct size and rating.
4. Ensure that the flange taps are aligned and level.
5. Weld the orifice flange to the pipe. To avoid serious burns, allow the orifice flanges to cool before continuing.
Step 3: Install the Orifice Plate:
1. Depressurize the line using site-specific requirements
2. Loosen all studs and nuts.
3. Remove the studs in one-half of the flange union.
4. Spread flange union by turning jackscrews clockwise.
5. Install the new plate or remove the existing plate for replacement or inspection.
6. Install the new gaskets when installing the plate. It is recommended that new gaskets be installed each time the orifice flange union is separated.
7. Center the plate in the pipe I.D.
8. Release the flange union by turning the jackscrews counter-clockwise.
9. Replace the studs.
10. Tighten studs in a star pattern.

Rosemount 1497 Types:
1497 WN
1497 RJ
1497SO

Step 1: Determine the Proper Orientation
See “Location and Orientation” on page 2-3.

Step 2: Install the Meter Section
Follow these steps to weld the orifice flanges to the pipe.
1. Depressurize the line using site-specific requirements
2. Remove the section of pipe that will be replaced by the meter section using site-specific requirements
3. Ensure that the pipe mounting flange is the correct size and rating
a. For flanged models, ensure the pipe mounting flange is the same size or rating.
b. For threaded models, ensure the pipe union or coupling is the same size pipe thread as the meter section

4. Orient the assembly appropriately for the type of service (liquid, gas, or steam).
5. Ensure that the I.D. of the meter section and the I.D. of the pipe are concentric.
6. Complete assembly to the appropriate connections. To avoid serious burns, allow the orifice flanges to cool before continuing.

For commissioning, operation and maintenance, refer to the appropriate transmitter reference manual

- Rosemount 3051C Pressure Transmitter Reference Manual (document number 00809-0100-4001)
- Rosemount 3051S Series Pressure Transmitter Reference Manual (document number 00809-0100-4801)
Appendix A  Reference Data

SPECIFICATION

The Rosemount 1595 can be used with Rosemount 1496 Orifice Flange Unions and Rosemount 1497 Meter Sections. For product offering see document number 00813-0100-4792.

Performance

Flow Coefficient Uncertainty

<td>0.75%</td>
</tr>
</tbody>
</table>

(1) For 0.65 beta and ReD< 10,000 add an additional 0.5% to the Discharge Coefficient Uncertainty.

Sizing

Perform a flow calculation using the Instrument Toolkit™ software package. Alternatively, contact an Emerson Process Management representative. The Configuration Data Sheet is required prior to order for application verification.

Straight Pipe Requirement

Use the appropriate lengths of straight pipe upstream and downstream of the 1595 to minimize the effects of moderate flow disturbances in the pipe. Table A-2 lists recommended lengths of straight pipe.

Table A-2. 1595 Straight Pipe Requirements(1) (2)

<table>

</tbody>
</table>

(1) Consult an Emerson Process Management representative if disturbance is not listed.
(2) Refer to ISO 5167 for recommended lengths when using flow straighteners.
Pressure Tap Orientation
Orient the 1595 Conditioning Orifice Plate to the effect that the pressure taps are centered between any 2 (of 4) orifice bore holes.

Centering Requirements
The 1595 should be installed so that it is centered in the pipes as recommended by ISO-5167.

Functional

Service and Flow Range
Liquid, gas or vapor turbulent flow, for pipe Reynold’s Numbers greater than 2,000. For pipe Reynold's Numbers less than 10,000 add an additional +0.5% uncertainty to the discharge coefficient uncertainty.

Pipe Sizes
2 to 24-in. (50 to 600 mm). Contact Emerson Process Management for other pipe sizes.

Operating Limits
Temperature Range: –320 to 1200 °F (–196 to 649 °C)
• – 320 to 800 °F (–196 to 427 °C) and differential pressure up to 800 inH₂O
• 800 to 1200 °F (427 to 649 °C) and differential pressure up to 400 inH₂O

Maximum Working Pressure
• Flange rating per ANSI B16.5.

Flange Mounting Hardware
• The 1595 can be tailored for use in conjunction with the Rosemount 1496 Flange Union and, if required, the Rosemount 1497 Meter Section. See page A-4, A-5, A-6 and Product Data Sheet 00813-0100-4792 for more information regarding the Rosemount 1496 and 1497.
Orifice Bore Sizes

Beta (β) is calculated by $2 \times \frac{d}{\text{pipe size}}$.

| Code Conformance              |
| J5(6)                         | NACE MR-0175-91 |

| Country Certification         |
| J1                            | Canadian Registration |

Typical Model Number: 1595 P 060 A3 S A 040

(1) Available up to 10-in. (250 mm) line size.
(2) Consult factory for availability.
(3) Previously PN64.
(4) For a Universal plate style in a 6-in. line size, the plate thickness is 0.125-in. and you will need to select code A.
(5) For a Universal plate style in a 14-in. line size, the plate thickness is 0.250-in. and you will need to select code B.
Appendix B  Installation Drawings

See the appropriate reference manual for 1496 Flange Unions and 1497 Meter sections being used in the assembly.
