# Rosemount 8700 Series Magnetic Flowmeter Systems

THE 8700 SERIES ...

- Rosemount 8712 HART Transmitter available with Device Diagnostics to improve reliability and performance. Provides quick setup with easy-to-use local operator interface.
- Rosemount 8712H/8707 High-Signal System
   Pulsed dc solutions for the most demanding flow measurement applications
- Rosemount 8705 Flanged flowtube Fully welded flowtube for maximum protection (standard ISO lay length)
- Rosemount 8711 Wafer flowtube -Economical, compact, and light weight flowtube, provided with alignment rings for easy installation
- Rosemount 8721 Hygienic flowtube -Specifically designed for food, beverage, and life sciences applications.
- Rosemount 8732 HART/8742 Foundation Fieldbus Transmitter - Integral-mount design eliminates wiring error, backlit display for easy viewing, and explosion-proof housing for hazardous environments. 8742 available with Device Diagnostics to improve mag reliability and performance

## **Rosemount 8700 Series System Overview**

### Rosemount 8712D/H

The remote mount Rosemount 8712 transmitter brings diagnostifs to any HART/ 4-20mA system that can change how magemeters are installed, maintained, and verified. The 8712 also features an easy-to-use operator interface, with quick access to all diagnostic information, and instant access to basic configuration setup through dedicated keys.

### Rosemount 8732C

The integral mount Rosemount 8732C transmitter has an explosion proof housing and full RFI/EMI protection that is ideal for harsh environment installations where moisture and contaminant in filtration are possible. With an optional backlit 2 line by 16 character local operator interface, the transmitter can be configured by optical switches to simplify adjustments in hazardous environments without removing the cover.

### Rosemount 8714D

The Rosemount 8714D Calibration Standard attaches to a 8712D, 8732, or 8742C transmitter's flowtube connections to ensure traceability to NIST standards and long-term accuracy of the flowmeter system. The 8714D is not compatible with 8712H high-signal transmitter.

### **Flanged Flowtubes**

All flanged Rosemount flowtubes are fabricated from stainless and carbon steel and welded to provide a hermetic seal that protects against moisture and other contaminants. Sizes range from <sup>1</sup>/<sub>2</sub> inch (15 mm) to 36 inch (900 mm). The sealed housing ensures maximum flowtube reliability by protecting all internal components and wiring from the most hostile environments.

### **Hygienic Flowtubes**

The 8721 hygienic flowtube is specifically designed for the demanding applications in food, beverage, and life sciences. The robust, all-welded, full diameter flowtube is constructed of FDA approved materials that are fit for purpose, and is authorized to display the 3-A Symbol (Authorization #1222), is certified by EHEDG (#C03-5229) and is approved for use in FDA Grade A milk meter based timing loops (M-b 350). Sizes range from <sup>1</sup>/<sub>2</sub>" (15mm) to 4" (100mm) and are available in a variety of industry standard process connections.

### Wafer Flowtubes

The flangeless design of the 8711 wafer flowtube makes it an economical, compact, and lightweight alternative to flanged magnetic flowmeters. Alignment rings, provided with every Rosemount 8711 flowtube, center the flowtube in the process line and makes the installation easier.

### High-Signal Magmeter System <sup>(1)</sup>

The Rosemount 8707 High-Signal Flowtube, used in conjunction with the 8712H High-Signal Transmitter, forms the Rosemount High-Signal Magnetic Flowmeter System. This system provides stable flow measurement in the most difficult high-noise applications while maintaining the benefits of dc technology. The increased signal strength of the Rosemount<sup>®</sup> high-signal system is made possible through a combination of flowtube coil design that incorporates the most advance materials and an extremely efficient and innovative coil drive circuit. The increased signal strength of the Rosemount high-signal system, coupled with advanced signal processing and superior filtering techniques, provides the solution to demanding flow measurement applications.

(1) The high-signal magmeter system is not available in Europe.

## **Rosemount Magmeter Diagnostics Power PlantWeb**

### Rosemount Mag Diagnostics Power PlantWeb to Reduce Cost & Improve Output by Enabling New Practices

PlantWeb is a digital plant architecture that uses the power of field intelligence to improve plant performance by increasing output and reducing cost. Whether in FOUNDATION Fieldbus or a HART/4-20 mA system, Rosemount Magmeters provide device diagnostics that powers PlantWeb and informs the user of abnormal situations throughout the life of the meter - from Installation to Maintenance and Meter Verification. With Rosemount Magmeter diagnostics enabled, users can change their practices to improve plant availability and output, and reduce costs through simplified installation, maintenance and troubleshooting.

### **OPTIONS FOR ACCESSING DIAGNOSTICS**

Rosemount Magmeter Diagnostics can be accessed through the Local Operator Interface (LOI), the 375 Handheld Communicator, and AMS Device Manager.

### Access Diagnostics through the LOI for quicker installation, maintenance, and meter verification

Rosemount Magmeter Diagnostics are available through the LOI to make maintenance of every magmeter easier.

### Access Diagnostics through AMS Device Manager for the Ultimate Value with PlantWeb Alerts

The value of the Diagnostics increases significantly when AMS is used. Now the user gets a simplified screen flow and procedures for how to respond to the Diagnostic messages. The user maximizes the value of the Diagnostics to power PlantWeb when they use an online AMS package with PlantWeb alerts that inform the user through a red light when a Diagnostic has tripped.

## Rosemount 8700 Series

### Internal Flow Simulator Improves Transmitter Verification Practice

### **Diagnostic in LOI**

DATA DISPLAY CONTROL TOTAL

Transmitter Verification through flow simulation.

Deviation from expected calibration value.

Test Complete Transmitter OK

### **Grounding/ Wiring Diagnostic Improves Installation Practices**

#### **Diagnostic in LOI**

Grounding and wiring fault displays on LOI.

Error messages under Diagnostic menu.

Line noise value can be viewed. If line noise is > 5 mV, Diagnostic is tripped.

### Diagnostic in AMS

Overview Critical Informational Diagnostics	
Empty Pipe	High Process Noise
<ul> <li>Empty pipe detected</li> </ul>	High Process Noise Detected
EP Value 0.63	5Hz SNR 95.5
EP Trig. Level 100.00	37Hz SNR 3720.1
Electronics Temperature	Coil driv freq 5Hz 🔄 Hz
<ul> <li>Electronics Temperature Out of Range</li> </ul>	Note: It is recommended that the Signal to Noise Ratio(SNR) be greater than 25 when flow is present.
Elec Temp 86.9 F	Grounding/Wiring Fault
Internal Flow Simulator	Grounding/Wiring Fault
<ul> <li>Internal Flow Simulation Test Failed</li> </ul>	Line Noise 5.4 mV
Internal Flow Sim. Deviation NaN %	Note: A line noise of less than 5 mV is recommended
	Close Help

Grounding and wiring is tripped and shown in AMS status screen.

### High Process Noise Diagnostic Improves Process Management

### **Diagnostic in LOI**

LOI indicates high process noise is detected.

Signal-to-noise ratio (SNR) is viewed in Diagnostic menu. If < 25:1, diagnostic tripped.

Improved SNR and signal stability by moving coil drive frequency from 5 Hz to 37.5 Hz.

### **Diagnostic in AMS**

mpty Pipe	High Process Noise
Empty pipe detected	High Process Noise Detected
P Value 1.06	SHz SNR 5.7
P Trig. Level 100.00	37Hz SNR 3174.7
Dectorics Temperature	Coll driv freq 5Hz - Hz
Electronics Temperature Out of Range	Note: It is recommended that the Signal to Noise Ratio(SNR) be greater than 25 when flow is present.
lec Temp 06.2 F	Grounding/Wiring Fault
nternal Flow Simulator	Grounding/Weing Fault

nternal Flow Sim. Deviation NaN 12	Note: A line noise of less than 5 mV is recommended
	- (S)
	Clove Help

AMS status screen indicates high process noises detected and shows SNR at both coil drive frequencies.

Field Device Specific Status Byte 2 - Data that has Field Device status information relating to: failures / warnings / status of process's.	
Empty Pipe Detected	
The flowtube is not full of fluid. The process variable is zero. The following actions can be taken if empty pipe detection is unexpected.	
1. Verify flowtube is full.	
2. Set the 'EP Trig. Level' to a value above the 'EP Value' seen with a full pipe.	3
<ol> <li>Increase the 'EP Counts' on the diagnostic tab of the configuration screen to compensate for process noise. The Empty Pipe Counts is the number of consecutive Empty Pipe Value readings above the Empty Pipe Trigger Level required to set the Empty Pipe diagnostic. The count range is 5-50, with factory default set at 5.</li> </ol>	Process None Hyb-Process None Detected (24)
4. Increase process fluid conductivity above 50 microsiemens/cm.	5NR [ 83
5. Properly connect the wiring between the flowtube and the transmitter on the flowtube. Corresponding terminal block numbers in the flowtube and transmitter must be connected.	Inc Mag. 1992
6. Perform flowtube electrical resistance tests. Confirm the resistance reading between coil ground (ground symbol) and coil (1 and 2) is infinity. Confirm the resistance reading between electrode ground (17) and an electrode (18 or 19) is greater than 2 kohms and rises. For more detailed information, consult the flowtube product manual.	andeg-Veilerg-Fault Jossederg-Veilerg-Fault Faces 73 eV A Aller man of Han Fault AV is to conservable
For difficult applications, record the 'EP Value' with both a full pipe and an empty pipe. Set the 'EP Trig. Level' between the two values.	
To turn off empty pipe diagnostic, go to the diagnostic tab on the configuration screen.	Date

AMS help provides procedure for adjusting mag coil drive frequency to improve signal stability.

## **Rosemount 8712D/H Transmitter Specifications**

### **Functional Specifications**

### **Flowtube Compatibility**

Rosemount 8712 is compatible with all Rosemount flowtubes: 8705, 8707, 8711, 8721, and 570TM. The 8712D/U is also compatible with AC and DC powered flowtubes of other manufacturers. The 8712H is only compatible with 8707 High-Signal flowtube.

### **Flowtube Coil Resistance**

Rosemount 8712D/U: 350  $\Omega$  maximum

Rosemount 8712H: 12  $\Omega$  maximum

### **Flow Rate Range**

**8712D:** Capable of processing signals from fluids that are traveling between 0.01 and 40 ft/s (0 to 12 m/s) for both forward and reverse flow in all flowtube sizes. Full scale continuously adjustable between -40 and 40 ft/s (-12 to 12 m/s).

**8712H:** Capable of processing signals from fluids that are traveling between 0.04 and 30 ft/s (0.01 to 10 m/s) for both forward and reverse flow in all flowtube sizes. Full scale continuously adjustable between -30 and 30 ft/s (-10 to 10 m/s).

### **Conductivity Limits**

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for Rosemount 8712D. Process liquid must have a conductivity of 50 microsiemens/cm (50 micromhos/cm) for the 8712H. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

### **Power Supply**

8712D: 90-250 V ac ±10%, 50–60 Hz or 12–42 V dc

8712H: 115 V ac ±10%, 50–60 Hz

### **DC Load Limitations (Analog Output)**

Maximum loop resistance is determined by the voltage level of the external power supply, as described by:

 $\begin{array}{ll} \mathsf{R}_{max} = & 41.7(\mathsf{V}_{ps}-10.8)\\ \mathsf{V}_{ps} = & \mathsf{Power Supply Voltage (Volts)}\\ \mathsf{R}_{max} = & \mathsf{Maximum Loop Resistance (Ohms)} \end{array}$ 

### NOTE

HART Communication requires a minimum loop resistance of 250 ohms.

#### Supply Current Requirements (8712D)

Units powered by 12-42 V dc power supply may draw up to 2 amp of current.

I = Supply current requirement (Amps) V = Power supply voltage (Volts)

#### Installation Coordination

Installation (overvoltage) Category II

### **Power Consumption**

8712D:	10 watts maximum
8712H:	300 watts maximum

### **Ambient Temperature Limits**

Operating	
8712D:	–20 to 140°F (–29 to 60 °C) with local operator interface
	–40 to 165°F (–40 to 74°C) without local operator interface
8712H:	–20 to 130 °F (–29 to 54 °C) with or without local operator interface

### Storage

-22 to 176 °F (-40 to 80 °C)

#### **Humidity Limits**

0–100% RH at 120 °F (49 °C), decreases linearly to 10% RH at 130 °F (54 °C)

### **Enclosure Ratings**

Enclosure Type 4X, IP65

00813-0100-4727, Rev NB Catalog 2006 - 2007

## Rosemount 8700 Series

### **Output Signals**

#### Analog Output Adjustment

4–20 mA, jumper-selectable as internally or externally powered 5 to 24 V dc; 0 to 1000  $\Omega$  load.

Engineering units—lower and upper range values are user-selectable.

Output automatically scaled to provide 4 mA at lower range value and 20 mA at upper range value.

8712D: Full scale continuously adjustable between -40 and 40 ft/s (-12 to 12 m/sec), 1 ft/s (0.3 m/s) minimum span.

8712H: Full scale continuously adjustable between -30 and 30 ft/s (-10 to 10 m/sec), 1 ft/s (0.3 m/s) minimum span.

HART Communications, digital flow signal, superimposed on 4–20 mA signal, available for control system interface. 250  $\Omega$  required for HART communications.

#### **Scalable Frequency Adjustment**

**8712H:** 0-1000 Hz, externally powered at 5 to 24 V dc, transistor switch closure up to 5.75 W. Pulse value can be set to equal desired volume in selected engineering units. Pulse width adjustable from 0.5 to 100 m/s. Local operator interface automatically calculates and displays maximum allowable output frequency.

**8712D:** 0-10,000Hz, externally powered at 5 to 24 V dc, transistor switch closure supports power loads up to 2W for frequencies up to 4000Hz, and 5 V dc at 0.1 W at maximum frequency of 10,000 Hz. Pulse can be set to equal desired velocity or volume in user selectable engineering units. Pulse width is adjustable from 1.5 to 500 msec, below 1.5 msec pulse width automatically switches to 50% duty cycle.

#### **Auxiliary Output Function**

Externally powered at 5 to 24 V dc, transistor switch closure up to 3 W to indicate either:

Reverse Flow: Activates switch closure output when reverse flow is detected. The reverse flow rate is displayed.

Zero Flow: Activates switch closure output when flow goes to 0 ft/s.

#### **Positive Zero Return**

Forces outputs of the transmitter to the zero flow rate signal level. Activated by applying a contact closure.

#### Software Lockout

Security lockout jumper on the electronics board can be set to deactivate all LOI and HART-based communicator functions to protect configuration variables from unwanted or accidental change.

### **Output Testing**

#### **Analog Output Test**

Transmitter may be commanded to supply a specified current between 3.75 and 23.25 mA

#### **Pulse Output Test**

**8712H:** Transmitter may be commanded to supply a specified frequency between 1 and 1000 Hz

**8712D:** Transmitter may be commanded to supply a specified frequency between 1 pulse/ day and 10,000 Hz

### Turn-on Time

**8712H:** 30 minutes to rated accuracy from power up, 5 seconds from power interruption

**8712D:** 5 minutes to rated accuracy from power up, 5 seconds from power interruption

### Start-up Time

0.2 seconds from zero flow

### Low Flow Cutoff

Adjustable between 0.04 and 1 ft/s (0.01 and 0.3 m/s). Below selected value, output is driven to the zero flow rate signal level. (8712D is adjustable between 0.01 and 1 ft/s).

### **Overrange Capability**

Signal output will remain linear until 110% of upper range value. The signal output will remain constant above these values. Out of range message displayed on LOI and the HART Communicator.

### Damping

8712H: Adjustable between 0.2 and 256 seconds 8712D: Adjustable between 0.0 and 256 seconds

### **Flowtube Compensation**

Rosemount flowtubes are flow-calibrated and assigned a calibration factor at the factory. The calibration factor is entered into the transmitter, enabling interchangeability of flowtubes without calculations or a compromise in accuracy.

8712D transmitters and other manufacturer's flowtubes can be calibrated at known process conditions or at the Rosemount NIST-Traceable Flow Facility. Transmitters calibrated on site require a two-step procedure to match known flow rate.

### **Performance Specifications**

(System specifications are given using the frequency output and with the unit at referenced conditions.)

### Accuracy

### Rosemount 8712H with 8707 Flowtube

System accuracy is  $\pm 0.5\%$  of rate from 3 to 30 ft/s (1 to 10 m/s); between 0.04 and 3.0 ft/s (0.01 and 0.3 m/s), the system has an accuracy of  $\pm 0.005$  ft/s (0.0015 m/s). Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

### Rosemount 8712D with Other Manufacturers' Flowtubes

When calibrated in the Rosemount Flow Facility, system accuracies as good as 0.5% of rate can be attained. Analog output has the same accuracy as frequency output, plus an additional 0.1% of span.

There is no accuracy specification for other manufacturers' flowtubes calibrated in the process line.

### Rosemount 8712D with 8705 and 8721 Flowtube

System accuracy is  $\pm 0.5\%$  of rate from 1 to 40 ft/s (0.3 to 12 m/s); between 0.04 and 1.0 ft/s (0.01 and 0.3 m/s), the system has an accuracy of  $\pm 0.005$  ft/s (0.0015 m/s). Analog output has the same accuracy as frequency output plus an additional 0.05% of span.

### Rosemount 8712D with 8711 Flowtube

System accuracy is  $\pm 0.5\%$  of rate from 3 to 40 ft/s (1 to 12 m/s); below 3 ft/s (1 m/s), the system has an accuracy of  $\pm 0.015$  ft/s (0.005 m/s). Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

### Vibration Effect

±0.1% of span per SAMA PMC 31.1, Level 2

### Repeatability

±0.1% of reading

### **Response Time**

0.2 seconds maximum response to step change in input

### Stability

±0.1% of rate over six months

### **Ambient Temperature Effect**

8712H: ±1% per 100 °F (37.8 °C) 8712D: 0.25% over operating temperature range

### **RFI Effect**

Class 1, A, B, C: ±0.5% of span at 3 V/m per SAMA PMC 33.1, wires and conduit EN61326-1 1997 + A1/A2 (Industrial) electromagnetic compatibility (EMC) for process and laboratory apparatus.

### Supply Voltage Effect

Transmitter meets supply voltage effect requirements of SAMA PMC 31.1, Section 5.10.1 through 5.10.5. Transmitter withstands surges in supply voltage as specified in IEEE 472, 1974

### **Physical Specifications**

### Materials of Construction

Housing

Low-copper aluminum, NEMA 4X and IEC 60529 IP65 Pollution Degree 2

Paint Polyurethane

Cover Gasket

Rubber

### **Electrical Connections**

Four <sup>1</sup>/2–14 NPT connections provided on the base of the transmitter. Screw terminals provided for all of the connections. Power wiring connected to the transmitter only. Remote mounted transmitters require only a single conduit connection to the flowtube. Integrally mounted transmitters are factory wired to the flowtube.

### NOTE

If 3/4 - 14 NPT connections are required, 1/2 to 3/4 inch adapter kits are available for order.

### Line Power Fuses

#### 115 V ac systems (8712H)

5 amp, Quick-acting Bussman AGCI or equivalent (Rosemount 8712H only).

### 90-250 V ac systems (8712D)

2 amp, Quick-acting Bussman AGCI or equivalent

#### 12-42 V dc systems (8712D)

3 amp, Quick-acting Bussman AGCI or equivalent

### **Transmitter Weight**

Transmitter approximately 9 lb (4 kg). Add 1 lb (0.5 kg) for local operator interface.

## **Rosemount 8732C Transmitter Specifications**

### **Functional Specifications**

### **Flowtube Compatibility**

Compatible with Rosemount 8705, 8711, and 8721 flowtubes.

#### **Flowtube Coil Resistance**

 $25 \Omega$  maximum

### Flow Rate Range

Capable of processing signals from fluids that are traveling between 0.04 and 30 ft/s (0.01 to 10 m/s) for both forward and reverse flow in all flowtube sizes. Full scale continuously adjustable between -30 and 30 ft/s (-10 to 10 m/s).

### **Conductivity Limits**

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for 8732C. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

### **Power Supply**

85 -250 V ac ±10%, 50-60 Hz or 15-50 V dc

### **DC Load Limitations (Analog Output)**

Maximum loop resistance is determined by the voltage level of the external power supply, as described by:

R<sub>max</sub> = 41.7(V<sub>ps</sub> - 10.8)

V<sub>ps</sub> = Power Supply Voltage (Volts)

R<sub>max</sub> = Maximum Loop Resistance (Ohms)

### NOTE

HART Communication requires a minimum loop resistance of 250 ohms.

### **Supply Current Requirements**

Units powered by 15-50 V dc power supply may draw up to 1 amp of current.

### Installation Coordination

Installation (overvoltage) Category II

### **Power Consumption**

10 watts maximum

### **Ambient Temperature Limits**

#### Operating

-40 to 165 °F (-40 to 74 °C) without local operator interface 13 to 149 °F (-25 to 65 °C) with local operator interface

#### Storage

-40 to 185 °F (-40 to 85 °C)

#### **Humidity Limits**

0-100% RH to 150 °F (65 °C)

### **Enclosure Rating**

NEMA 4X CSA Type 4X, IEC 60529, IP67 (transmitter), Pollution Degree 2

### **Output Signals**

#### Analog Output Adjustment

4–20 mA, jumper-selectable as internally or externally powered 5 to 24 V dc; 0 to 1000  $\Omega$  load.

Engineering units—lower and upper range values are user-selectable.

Output automatically scaled to provide 4 mA at lower range value and 20 mA at upper range value. Full scale continuously adjustable between -30 and 30 ft/s (-10 to 10 m/sec), 1 ft/s (0.3 m/s) minimum span.

HART Communications, digital flow signal, superimposed on 4–20 mA signal, available for control system interface. 250  $\Omega$  required for HART communications.

#### Scalable Frequency Adjustment

0-1000 Hz, externally powered at 5 to 24 V dc, translator switch closure up to 5.75 w. Pulse value can be set to equal desired volume in selected engineering units. Pulse width adjustable from 0.5 to 100 m/s. Local operator interface automatically calculates and displays maximum allowable output frequency.

#### **Auxiliary Output Function**

Externally powered at 5 to 24 V dc, transistor switch closure up to 3 W to indicate either:

Reverse Flow: Activates switch closure output when reverse flow is detected. The reverse flow rate is displayed.

Zero Flow: Activates switch closure output when flow goes to 0 ft/s.

### Software Lockout

Security lockout switch on the electronics board can be set to deactivate all LOI and HART-based communicator functions to protect configuration variables from unwanted or accidental change.

### **Display Lockout**

All optical switches on the display can be locked locally from the display layout configuration screen by holding the upper right optical switch for 20 seconds. The display can be reactivated holding the same switch for 20 seconds.

### **Output Testing**

#### Analog Output Test

Transmitter may be commanded to supply a specified current between 3.75 and 23.25 mA.

#### Pulse Output Test

Transmitter may be commanded to supply a specified frequency between 1 and 1000 Hz.

#### **Turn-on Time**

30 minutes to rated accuracy from power up; 5 seconds from power interruption

#### Start-up Time

0.2 seconds from zero flow

### Low Flow Cutoff

Adjustable between 0.001 and 1 ft/s (0.0003 and 0.3 m/s). Below selected value, output is driven to the zero flow rate signal level.

#### **Overrange Capability**

Signal output will remain linear until 110% of upper range value or 33 ft/s. The signal output will remain constant above these values. Out of range message displayed on LOI and the HART Communicator.

#### Damping

Adjustable between 0.2 and 256 seconds

### **Flowtube Compensation**

Rosemount flowtubes are flow-calibrated and assigned a calibration factor at the factory. The calibration factor is entered into the transmitter, enabling interchangeability of flowtubes without calculations or a compromise in accuracy.

00813-0100-4727, Rev NB Catalog 2006 - 2007

### **Performance Specifications**

(System specifications are given using the frequency output and with the unit at reference conditions.)

### Accuracy

### Rosemount 8732C with 8705 or 8721 Flowtubes:

System accuracy is  $\pm 0.5\%$  of rate from 1 to 30 ft/s (0.3 to 10 m/s); below 1.0 ft/s (0.3 m/s), the system has an accuracy of  $\pm 0.005$  ft/s (0.0015 m/s). Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

### Rosemount 8732C with 8711 Flowtube:

System accuracy is  $\pm 0.5\%$  of rate from 3 to 30 ft/s (0.9 to 10 m/s); below 3 ft/s (0.9 m/s), the system has an accuracy of  $\pm 0.015$  ft/s (0.005 m/s). Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

### **Vibration Effect**

IEC 60770-1

### Repeatability

±0.1% of reading

### **Response Time**

0.2 seconds maximum response to step change in input

### Stability

±0.1% of rate over six months

### **Ambient Temperature Effect**

±0.25% change over operating temperature range

### **EMC Compliance**

EN61326-1 1997 + A1/A2 (Industrial) electromagnetic compatibility (EMC) for process and laboratory apparatus.

### **Physical Specifications**

### Materials of Construction

### Housing

Low copper aluminum, NEMA 4X and IEC 60529 IP66 Pollution Degree 2

Paint

Polyurethane

Cover Gasket Rubber

### **Electrical Connections**

Two <sup>1</sup>/2–14 NPT connections provided on the transmitter housing. PG13.5 and CM20 adapters are available. Screw terminals provided for all connections. Power wiring connected to transmitter only. Integrally mounted transmitters are factory wired to the flowtube.

### Mounting

Transmitter is mounted integrally with the flowtube and does not require interconnecting cables.

### **Transmitter Weight**

Approximately 7 pounds (3.2 kg). Add 1 pound (0.5 kg) for Option Code M4.

## **Rosemount 8742C Transmitter Specifications**

### **Functional Specifications**

### **Flowtube Compatibility**

Compatible with Rosemount 8705, 8711, and 8721 flowtubes.

### **Conductivity Limits**

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for 8742C. Excludes the effects of interconnecting cable length in remote mount transmitter installations.

### Flowtube Coil Resistance

25 maximum

#### **Flow Rate Range**

Capable of processing signals from fluids that are traveling between 0 and 40 ft/s (0 to 12 m/s) for both forward and reverse flow in all flowtube sizes.

### **Power Supply**

90-250 V ac, 50-60 Hz, 15-50 V dc

### **Supply Current Requirements**

Units powered by 15-50 V dc power supply may draw up to 1 amp of current.

V = Power supply voltage (Volts)

### Installation Coordination

Installation (overvoltage) Category II

#### **Power Consumption**

10 watts maximum

#### **Ambient Temperature Limits**

#### Operating

-40 to 165 °F (-40 to 74 °C) without local operator interface -13 to 147 °F (-25 to 65 °C) with local operator interface

#### Storage

-40 to 185 °F (-40 to 85 °C)

### **Humidity Limits**

0-100% RH to 150 °F (65 °C)

NEMA 4X CSA Type 4X, IEC 60529, IP67 (transmitter), Pollution Degree 2

### **Output Signal**

Manchester-encoded digital signal that conforms to IEC 1158-2 and ISA 50.02  $\,$ 

### **FOUNDATION Fieldbus Specifications**

#### **Schedule Entries**

Seven (7)

#### Links

Twenty (20)

#### Virtual Communications Relationships (VCRs)

One (1) predefined (F6, F7) Nineteen (19) configurable (see Table 1)

### TABLE 1. Block Information

Block	Base Index	Execution Time (Milliseconds)
Resource (RB)	300	_
Transducer (TB)	400	—
Analog Input (AI)	1,000	15
Proportional/Integral/ Derivative (PID)	10,000	25
Intergrator	12,000	20

### **Reverse Flow**

Detects and reports reverse flow

#### Software Lockout

A write-lock switch and software lockout are provided in the resource function block.

#### **Turn-on Time**

30 minutes to rated accuracy from power up; 10 seconds communication from power interruption

#### Start-up Time

0.2 seconds from zero flow

#### Low Flow Cutoff

Adjustable between 0 and 1 ft/s. Below selected value, output is driven to the zero flow rate.

### **Overrange Capability**

Signal output continues to 110% of upper range value setting, then remains constant. Messages are supplied to the fieldbus network.

#### Damping

Adjustable between 0 and 255 seconds

### **Product Data Sheet**

00813-0100-4727, Rev NB Catalog 2006 - 2007

### **Performance Specifications**

(System specifications are given using the unit at referenced conditions.)

### Accuracy

## Rosemount 8742C Transmitter with 8705 and 8721 Flowtubes

System accuracy is  $\pm 0.5\%$  of rate from 1 to 40 ft/s (0.3 to 12 m/s); includes combined effects of linearity, hysteresis, repeatability, and calibration uncertainty; below 1.0 ft/s (0.3 m/s), the system has an accuracy of  $\pm 0.005$  ft/s (0.0015 m/s).

### Rosemount 8742C Transmitter with 8711 Flowtube

System accuracy is  $\pm 0.5\%$  of rate from 3 to 40 ft/s (0.9 to 12 m/s); includes combined effects of linearity, hysteresis, repeatability, and calibration uncertainty; below 3 ft/s (0.9 m/s), the system has an accuracy of  $\pm 0.015$  ft/s (0.005 m/s).

### Vibration Effect

IEC 60770-1

### Repeatability

±0.1% of reading

### **Response Time**

0.2 seconds maximum response to step change in input

Stability

 $\pm 0.1\%$  of rate over six months

### **Ambient Temperature Effect**

±0.25% of rate over operating temperature range

### **EMC** Compliance

EN61326-1 1997 + A1/A2 3(Industrial) electromagnetic compatibility (EMC) for process and laboratory apparatus.

### **Transient Protection**

The 8742C transmitter prevents damage to the flowmeter from transients compliant to:

IEC 6100 – 4-4 (for burst currents) IEC 6100 – 4-5 (for surge currents)

### **Mounting Position Effect**

None when installed to ensure flowtube remains full

### **Physical Specifications**

### Materials of Construction (Transmitter)

Housing

Low-copper aluminum

Paint Polyurethane

Cover Gasket Rubber

### **Electrical Connections**

Two<sup>1</sup>/2–14 NPT with number 8 screw terminal connections are provided for electrical wiring. PG13.5 and CM20 adapters are available. Screw terminals provided for all connections. Power wiring connected to transmitter only. Integrally mounted transmitters are factory wired to the flowtube.

### Mounting

Integrally mounted transmitters do not require interconnecting cables. The local display and transmitter can be rotated in 90° increments. Remote mounted transmitters require only a single conduit connection to the flowtube.

#### Weight

Approximately 7 pounds (3.2 kg). Add 0.5 pounds (0.5 kg) for local display.

## Rosemount 8705 Flanged and 8707 High-Signal Flanged Flowtubes Specifications

### **Functional Specifications**

Conductive liquids and slurries

#### Line Sizes

<sup>1</sup>/2–36 inch (15–900 mm) for Rosemount 8705 3–36 inch (80–600 mm) for Rosemount 8707

#### Interchangeability

Rosemount 8705 Flowtubes are interchangeable with 8712D, 8732, and 8742C Transmitters. Rosemount 8707 High-Signal Flowtubes are interchangeable with 8712H High-Signal Transmitters. System accuracy is maintained regardless of line size or optional features. Each flowtube nameplate has a sixteen-digit calibration number that can be entered into a transmitter through the Local Operator Interface (LOI) or the HART Communicator on the 8712H and the 8732C. In a FOUNDATION<sup>™</sup> fieldbus environment, the 8742C can be configured using the DeltaV<sup>™</sup> fieldbus configuration tool or another FOUNDATION fieldbus configuration device. No further calibration is necessary.

### Upper Range Limit

30 ft/s (10 m/s)

### **Process Temperature Limits**

**Teflon (PTFE) Lining** -20 to 350 °F (-29 to 177 °C)

**Tefzel (ETFE) Lining** -20 to 300 °F (-29 to 149 °C)

**PFA Lining** -20 to 350 °F (-29 to 177°C)

Polyurethane Lining 0 to 140 °F (-18 to 60 °C)

**Neoprene Lining** 0 to 185 °F (-18 to 85 °C)

Linatex Lining 0 to 158 °F (-18 to 70°C)

### Ambient Temperature Limits

–30 to 150 °F (–34 to 65 °C)

### **Pressure Limits**

See Table 2 and Table 4

### Vacuum Limits

### Teflon (PTFE) Lining

Full vacuum to 350 °F (177 °C) through 4-inch (100 mm) line sizes. Consult factory for vacuum applications with line sizes of 6 inches (150 mm) or larger.

### All Other Standard Flowtube Lining Materials

Full vacuum to maximum material temperature limits for all available line sizes.

### **Submergence Protection**

IP 68. Continuous to 30 feet (10 meters) Recommended with sealed cable glands

#### **Conductivity Limits**

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for 8705. Process liquid must have a conductivity of 50 microsiemens/cm (50 micromhos/cm) for 8707 when used with 8712H, 5 microsiemens/cm when used with other transmitters. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

### TABLE 2. Temperature vs. Pressure Limits<sup>(1)</sup>

Flowtube Temperature vs. Pressure Limits for ASME B16.5 Class Flanges ( <sup>1</sup> /2- to 36-inch line sizes) <sup>(2)</sup>					
		Pressure			
Flange Material	Flange Rating	@ -20 to 100 °F (-29 to 38 °C)	@ 200 °F (93 °C)	@ 300 °F (149 °C)	@ 350 °F (177 °C)
	Class 150	285 psi	260 psi	230 psi	215 psi
Carbon Steel	Class 300	740 psi	675 psi	655 psi	645 psi
	Class 600 <sup>(3)</sup>	1000 psi	800 psi	700 psi	650 psi
	Class 600 <sup>(4)</sup>	1480 psi	NA	NA	NA
	Class 900	2220 psi			
	Class 150	275 psi	235 psi	205 psi	190 psi

	PN 40	36.8 bar	30.3 bar	27.5 bar	26.5 bar

(1) Liner temperature limits must also be considered. Polyurethane, Linatex, and Neoprene have temperature limits of 140°F, 158°F, and 185°F, respectively.

(System specifications are given using the frequency output and with the unit at referenced conditions.)

## Rosemount 8700 Series

### Accuracy

#### Rosemount 8705 with 8712D, 8732C, or 8742C

 $\pm 0.5\%$  of rate from 1 to 30 ft/s (0.3 to 10 m/s). Includes combined effects of linearity, hysteresis, repeatability, and calibration uncertainty. Accuracy is  $\pm 0.005$  ft/s ( $\pm 0.0015$  m/s) from low-flow cutoff to 1.0 ft/s (0.3 m/s).

#### Rosemount 8707 with 8712D/H, 8732C, or 8742C

 $\pm 0.5\%$  of rate from 3 to 30 ft/s (1 to 10 m/s). Include combined effects of linearity, hysteresis, repeatability and calibration uncertainty. Accuracy is  $\pm 0.015$  ft/s ( $\pm 0.0045$  m/s) from low-flow cutoff to 3.0 ft/s (1 m/s).

### Vibration Effect

IEC 60770-1

### AISI Type 304 SST Sanitary Tri-Clover

3-A-compliant quick disconnect ferrule-mounted to ASME B16.5 (ANSI) Class 150 flange; 0.5- to 3-inch.

### **Electrical Connections**

Two  $^{1}/_{2-14}$  NPT connections with number 8 screw terminals are provided in the terminal enclosure for electrical wiring.

#### **Grounding Electrode**

A grounding electrode is installed similarly to the measurement electrodes through the flowtube lining on 8705 flowtubes. It is available in all electrode materials.

### **Grounding Rings**

Grounding rings are installed between the flange and the tube face on both ends of the flowtube. Single ground rings can be installed on either end of the flowtube. They have an I.D. slightly larger than the flowtube I.D. and an external tab to attach ground wiring. Grounding rings are available in 316L SST, Hastelloy-C, titanium, and tantalum.

#### Lining Protectors

Lining protectors are installed between the flange and the tube face on both ends of the flowtube. The leading edge of lining material is protected by the lining protector; lining protectors cannot be removed once they are installed. Lining protectors are available in 316L SST, Hastelloy-C, and titanium.

#### Dimensions

See Figure 3, Figure 4, and Figure 8 and Table 12, Table 16, and Table 17.

## **Rosemount 8711 Wafer Flowtube Specifications**

### SPECIFICATIONS

### **Functional Specifications**

### Service

Conductive liquids and slurries

### Line Sizes

0.15- through 8-inch (4 through 200 mm)

### Interchangeability

Rosemount 8711 Flowtubes are interchangeable with 8732 and 8742C Transmitters. System accuracy is maintained regardless of line size or optional features. Each flowtube nameplate has a sixteen-digit calibration number that can be entered into a transmitter through the Local Operator Interface (LOI) or the HART Communicator on the Rosemount 8712H and the 8732C. In a FOUNDATION fieldbus environment, the 8742C can be configured using the DeltaV fieldbus configuration tool or another FOUNDATION fieldbus configuration device. No further calibration is necessary.

### **Upper Range Limit**

30 ft/s (10 m/s)

### **Process Temperature Limits**

### Tefzel (ETFE) Lining

–20 to 300 °F (–29 to 149 °C) for 0.5- through 8-inch (15–200 mm) line sizes –20 to 200 °F (–29 to 93 °C) for 0.15- and 0.3-inch (4 and 8 mm) line sizes

### Teflon (PTFE) Lining

-20 to 350 °F (-29 to 177 °C)

### **Ambient Temperature Limits**

–30 to 150 °F (–34 to 65 °C)

### Maximum Safe Working Pressure at 100 °F (38 °C)

### Tefzel (ETFE) Lining

Full vacuum to 740 psi (5.1 MPa) for 0.5- through 8-inch (15 through 200 mm) flowtubes 285 psi (1.96 MPa) for 0.15- and 0.30-inch (4 and 8 mm) flowtubes

### Teflon (PTFE) Lining

Full vacuum through 4-inch (100 mm) line sizes. Consult factory for vacuum applications with line sizes of 6 inches (150 mm) or larger.

### **Conductivity Limits**

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for 8711. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

### **Performance Specifications**

(System specifications are given using the frequency output and with the unit at referenced conditions.)

### Accuracy

Rosemount 8711 with 8712D, 8732C, or 8742C Transmitters ±0.5% of rate from 3 to 30 ft/s (1 to 10 m/s) ±0.015 ft/s (0.0045 m/s) from low-flow cutoff to 3 ft/s (1 m/s)

### **Process Connections**

#### Mounts between these Flange Configurations

ASME B16.5 (ANSI): Class 150, 300 EN 1092 (DIN): PN 10 and 25 BS: 10 Table D, E, and F

### Studs, Nuts, and Washers<sup>(1)</sup>

### ASME B16.5 (ANSI)

0.15- through 1-inch (4 through 25 mm): 316 SST, ASTM A193, Grade B8M, Class 1 threaded mounting studs; ASTM A194, Grade 8M heavy hex nuts; SAE per ANSI B18.2.1, Type A, Series N flat washers.

1.5- through 8-inch (40 through 200 mm):
CS, ASTM A193, Grade B7, Class 1 threaded mounting studs;
ASTM A194, Grade 2H heavy hex nuts; SAE per ANSI B18.2.1, Type A, Series N flat washers; all items clear, chromate zinc-plated.

EN 1092 (DIN)

4 through 25 mm (0.15- through 1-inch): 316 SST ASTM A193, Grade B8M Class 1 threaded mounting studs; ASTM A194, Grade 8M, DIN 934 H=D, metric heavy hex nuts; 316 SST, A4, DIN 125 flat washers.

40 through 200 mm (1.5- through 8-inch):

CS, ASTM A193, Grade B7 threaded mounting studs; ASTM A194, Grade 2H, DIN 934 H=D, metric heavy hex nuts; CS, DIN 125 flat washers; all items yellow zinc-plated.

### **Electrical Connections**

Two  $^{1}/_{2-14}$  NPT connections with number 8 screw terminals are provided in the terminal enclosure for electrical wiring.

### **Grounding Electrode**

A grounding electrode is installed similarly to the measurement electrodes through the flowtube lining. It is available in all electrode materials.

### **Grounding Rings**

Grounding rings are installed between the flange and the tube face on both ends of the flowtube. They have an I.D. slightly larger than the flowtube I.D. and an external tab to attach ground wiring. Grounding rings are available in 316L SST, Hastelloy C-276, titanium, and tantalum.

### **Dimensions and Weight**

See Figure 7, Figure 8, and Table 18

 <sup>0.15</sup> and 0.30 inch (4 and 80 mm) flowtubes mount between <sup>1</sup>/<sub>2</sub>-inch flange.

## **Rosemount 8721 Sanitary Flowtube Specifications**

### NOTE

All transmitter specifications can be found in the Product Data Sheet 00813-0100-4727.

### **Functional Specifications**

### Service

Conductive liquids and slurries

### Line Sizes

<sup>1</sup>/2 -4 inch (15–100 mm)

### Flowtube Compatibility and Interchangeability

The Rosemount 8721 Flowtubes are interchangeable with Rosemount 8732, 8742, and 8712D transmitters. System accuracy is maintained regardless of line size or optional features. Each flowtube nameplate has a sixteen-digit calibration number that can be entered into the transmitter through the Local Operator Interface (LOI) or the HART Communicator. No further calibration is necessary.

### **Flowtube Compensation**

Rosemount flowtubes are flow-calibrated and assigned a calibration factor at the factory. The calibration factor is entered into the transmitter, enabling interchangeability of flowtubes without calculations or a compromise in accuracy.

### **Conductivity Limits**

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

### Flowtube Coil Resistance

 $5\Omega$  to  $10\Omega$  (line size dependant)

### **Flow Rate Range**

Capable of processing signals from fluids that are traveling between 0.04 and 33 ft/s (0.01 to 10 m/s) for both forward and reverse flow in all flowtube sizes. Full scale continuously adjustable between -33 and 33 ft/s (-10 to 10 m/s).

### Flowtube Ambient Temperature Limits

14 to 140 °F (-15 to 60 °C)

### **Process Temperature Limits**

**PFA Lining** -20 to 350 °F (-29 to 177 °C)

### **Pressure Limits**

Line Size	Max Working Pressure	CE Mark Max. Working Pressure
<sup>1</sup> /2 (15)	300 psi (20.7 bar)	300 psi (20.7 bar)
1 (25)	300 psi (20.7 bar)	300 psi (20.7 bar)
1 <sup>1</sup> /2 (40)	300 psi (20.7 bar)	300 psi (20.7 bar)
2 (50)	300 psi (20.7 bar)	300 psi (20.7 bar)
2 <sup>1</sup> /2 (65)	300 psi (20.7 bar)	240 psi (16.5 bar)
3 (80)	300 psi (20.7 bar)	198 psi (13.7 bar)
4 (100)	210 psi (14.5 bar)	148 psi (10.2 bar)

### Vacuum Limits

Full vacuum at maximum lining material temperature; consult factory.

### Submergence Protection (Flowtube)

IP68. Continuous to 30 ft (10 m).

### **Performance Specifications**

(System specifications are given using the frequency output and with the unit at referenced conditions).

### Accuracy

#### Rosemount 8732, 8742, or 8712D with 8721 Flowtube

System accuracy is  $\pm 0.5\%$  of rate from 1 to 30 ft/s (0.3 to 10 m/s); includes combined effects of linearity, hysteresis, repeatability, and calibration uncertainty; between 0.04 and 1.0 ft/s (0.01 and 0.5 m/s), the system has an accuracy of  $\pm 0.005$  ft/s. Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

### Repeatability

±0.1% of reading

### **Response Time**

0.2 seconds maximum response to step change in input

### Stability

±0.1% of rate over six months

### Ambient Temperature Effect

±1% per 100 °F (37.8 °C)

### Mounting Position Effect

None when installed to ensure flowtube remains full.

00813-0100-4727, Rev NB Catalog 2006 - 2007

## Rosemount 8700 Series

### **Physical Specifications**

### Mounting

Integrally mounted transmitters are factory-wired and do not require interconnecting cables. The transmitter can rotate in 90° increments. Remote mounted transmitters require only a single conduit connection to the flowtube.

### **Cable Requirements for Remote Transmitters**

### TABLE 7. Transmitter Input Power

Description	P/N
Signal Cable (20 AWG) Belden 8762,	08712-0061-0001
Alpha 2411 equivalent	
Coil Drive Cable (14 AWG) Belden 8720,	08712-0060-0001
Alpha 2442 equivalent	
Combination Signal and Coil Drive Cable	08712-0752-0001

Remote transmitter installations require equal lengths of signal and coil drive cables. Lengths from 5 to 1,000 feet (1.5 to 300 meters) may be specified, and will be shipped with the flowtube. When ordering the combination cable, the lengths specified must be from 5 to 500 feet (1.5 to 150 meters). For optimum performance, separate signal and coil cables are recommended.

### **Non-Wetted Materials (Flowtube)**

### Flowtube

304 Stainless Steel (wrapper), 304 Stainless Steel (pipe)

### **Terminal Junction Box**

Cast aluminum, polyurethane coated Optional: 304 Stainless Steel

### Paint

Polyurethane

### Weight

TABLE 8. 8721 Flowtube weight (pounds)

Line Size	Flowtube Only	008721-0350 Tri-Clamp fitting (each)
0.5	4.84	0.58
1.0	4.52	0.68
1.5	5.52	0.88
2.0	6.78	1.30
2.5	8.79	1.66
3.0	13.26	2.22
4.0	21.04	3.28

### 8732C Transmitter

5.25 pounds

8732C Transmitter with LOI

6.90 pounds

Aluminum remote junction box

1.84 pounds

### **Process Wetted Materials (Flowtube)**

### Liner

PFA with Ra < 32µinch (0.81µm)

### Electrodes

316L SST with Ra < 15μinch (0.38μm) Hastelloy C-276 with Ra < 15μinch (0.38μm) 90% Platinum-10% Iridium with Ra < 15μinch (0.38μm)

### **Process Connections**

The Rosemount 8721 Sanitary Flowtube is designed using a standard IDF fitting as the basis for providing a flexible, hygienic interface for a variety of process connections. The Rosemount 8721 Flowtube has the threaded or "male" end of the IDF fitting on the ends of the base flowtube. The flowtube can be directly connected with user supplied IDF fittings and gaskets. If other process connections are needed, the IDF fittings and gaskets can be provided and welded directly into the sanitary process tubing, or can be supplied with adapters to standard Tri-Clamp<sup>®</sup> process connections.

### Tri-Clamp<sup>®</sup> Sanitary Coupling

**IDF Sanitary Coupling (screw type)** IDF specification per BS4825 part 4

Weld Nipple DIN 11851 DIN 11864 SMS 1145

**Cherry-Burrell I-Line** 

### **Process Connection Material**

316L Stainless Steel with Ra < 32μinch (0.81μm) Optional Electropolished Surface Finish with Ra < 15μinch (0.38μm)

### **Process Connection Gasket Material**

Silicone EPDM Viton

### **Electrical Connections (Flowtube)**

Two  $^{3}$ /4–14 NPT connections with number 8 screw terminals are provided in the terminal enclosure for electrical wiring.

### **Flowtube Dimensions**

Refer to Figure 1

## Rosemount 8714D Reference Calibration Standard Specifications

### **Functional Specifications**

### **Ambient Temperature Limits**

**Operating** -30 to 140 °F (-34 to 60 °C)

Storage

-40 to 140 °F (-40 to 60 °C)

Humidity Limits 0 to 95% relative humidity

### **Performance Specifications**

### Accuracy

 $\pm 0.05\%$  of rate at 30 ft/s at 25°C  $\pm 0.10\%$  of rate at 10 ft/s and 3 ft/s

Warm-up Time 30 minutes

Ambient Temperature Effect < 0.015% of rate per 10 °F (< 0.027% per 10 °C)

### **Humidity Effect**

No effect from 0 to 60% relative humidity < 0.10% of rate from 60 to 90% relative humidity

### Long-Term Stability

< 0.10% of rate shift in one year

### Physical Specifications

### **Electrical Connections**

Electrical connections are compatible with 8712D, 8732 or 8742 terminal blocks. Electrical connections are not compatible with 8712H terminal block.

**Mounting** Any position is acceptable

### Materials of Construction

Housing

Extruded aluminum

Covers Stamped aluminum, silk-screened

Paint Polyurethane

Weight Approximately 3 lb (2 kg) Catalog 2006 - 2007

## **Product Certifications**

### **Approved Manufacturing Locations**

Rosemount Inc. — Eden Prairie, Minnesota, USA Fisher-Rosemount Technologias de Flujo, S.A. de C.V. — Chihuahua, Chihuahua, Mexico Veenendaal, The Netherlands

### **EUROPEAN DIRECTIVE INFORMATION**

The EC declaration of conformity for all applicable European directives for this product can be found on our website at www.rosemount.com. A hard copy may be obtained by contacting our local sales office.

### **ATEX Directive**

Rosemount Inc. complies with the ATEX Directive. Type n protection type in accordance with EN50 021

Closing of entries in the device must be carried out using the appropriate EExe or EExn metal cable gland and metal blanking plug or any appropriate ATEX approved cable gland and blanking plug with IP66 rating certified by an EU approved certification body.

# European Pressure Equipment Directive (PED) (97/23/EC)

### Rosemount 8705 and 8707 Magnetic Flowmeter flowtubes in line size and flange combinations:

Line Size: 1 1/2 inch - 3 inch with all flanges available.

Line Size: 4 inch - 24 inch with all DIN flanges and ANSI 150 and ANSI 300 flanges.

Line Size: 30 inch - 36 inch with AWWA 125 flanges QS Certificate of Assessment - EC No. PED-H-20 Module H Conformity Assessment

### Rosemount 8711 Magnetic Flowmeter Flowtubes Line Sizes: 1.5, 2, 3, 4, 6, and 8 inch

QS Certificate of Assessment - EC No. PED-H-20 Module H Conformity Assessment

### Rosemount 8721 Sanitary Magmeter Flowtubes

in line sizes of 1<sup>1</sup>/2 inch and larger: Module A Conformity Assessment

### All other Rosemount 8705/8707/8711/8721

### Flowtubes in line sizes of 1 inch and less: Sound Engineering Practice

Flowtubes that are SEP are outside the scope of PED and cannot be marked for compliance with PED.

Mandatory CE-marking for flowtubes in accordance with Article 15 of the PED can be found on the flowtube body (CE 0575).

Flowtube category I is assessed for conformity per module A procedures.

Flowtube categories II – IV, use module H for conformity assessment procedures.

# Electro Magnetic Compatibility (EMC) (89/336/EEC)(obsolete)

All Models EN 50081-1: 1992, EN 50082-2: 1995 (obsolete), EN 61326: 1997/ A1:1998 / A2:2000

Installed signal wiring should not be run together and should not be in the same cable tray as AC power wiring.

Device must be properly grounded or earthed according to local electric codes.

To improve protection against signal interference, shielded cable is recommended.

### Low Voltage Directive (93/68/EEC)

All Models 8732, Model 8742C - AC EN 61010-1: 1995

### Other important guidelines

Only use new, original parts.

To prevent the process medium escaping, do not unscrew or remove process flange bolts, adapter bolts or bleed screws during operation.

Maintenance shall only be done by qualified personnel.

### CE CE Marking

Compliance with all applicable European Union Directives. (Note: CE Marking is not available on Rosemount 8712H).

### HAZARDOUS LOCATION CERTIFICATIONS

Equivalent Hazardous Location Certifications for flowtube and transmitter must match in integrally-mounted magnetic flowmeter systems. Remote-mounted systems do not require matched hazardous location certification option codes.

### **Transmitter Approval Information**

### SPECIAL CONDITIONS FOR SAFE USE (X (03ATEX2052X):

If the Rosemount 8732 Flow Transmitter is used integrally with the Rosemount 8705 or 8711 Flowtubes, it shall be assured that the mechanical contact areas of the Flowtube and Flow Transmitter comply with the requirements for flat joints according to standard EN 50018, clause 5.2.

The relation between ambient temperature, process temperature, and temperature class is to be taken from the table under (15 - description) above. (See Table 11)

The electrical data is to be taken from the summary under (15 - electrical data) above. (See Table 12)

If the Rosemount 8732 Flow Transmitter is used integrally with the Junction Box, it shall be assured that the mechanical contact areas of the Junction Box and Flow Transmitter comply with the requirements for flanged joints according to standard EN 50018, clause 5.2.

### INSTALLATION INSTRUCTIONS:

The cable and conduit entry devices and blanking elements shall be of a certified flameproof type, suitable for the conditions of use and correctly installed. With the use of conduit, a certified stopping box shall be provided immediately to the entrance of the enclosure.

### SPECIAL CONDITIONS FOR SAFE USE (X) (03ATEX2159X):

The relation between ambient temperature, process temperature and temperature class is to be taken from the table under (15 - description) above. *(See Table 11)*.

If the Rosemount 8742C Flow Transmitter is used integrally with the Junction Box, it shall be assured that the mechanical contact areas of the Junction Box and Flow Transmitter comply with the requirements for flanged joints according to standard EN 50018, clause 5.2.

#### INSTALLATION INSTRUCTIONS:

The cable and conduit entry devices and the closing elements shall be of a certified increased safety type, suitable for the conditions of use and correctly installed.

At ambient temperatures above  $50^{\circ}$ C, the flow meter shall be used with heat resistant cables with a temperature rating of at least  $90^{\circ}$ C.

A Junction Box in type of explosion protection increased safety "e" may be attached to the base of the Rosemount 8742C Flow Transmitter, permitting remote mounting of the Rosemount 8705 and 8711 Flowtubes.

Ambient temperature range of the Junction Box: -20°C to +65°C.

The Junction Box is classified as II 2 G EEx e IIB T6 and certified under KEMA 03ATEX2052X.

### TABLE 18. Rosemount 8711 Flowtube Dimensions and Weight

(1) 0.15 and 0.30 inch (4 and 8 mm) flowtubes mount between  $\frac{1}{2}$ -inch (13 mm) flange.

### NOTE The Rosemount 8732C Connector Type is

compatible with the Rosemount 8742.

## **Magnetic Flowmeter Sizing**

### **Flowmeter Sizing**

Because of its effect on flow velocity, flowtube size is an important consideration. It may be necessary to select a magnetic flowmeter that is larger or smaller than the adjacent piping to ensure the fluid velocity is in the specified measuring range of the flowtube. Suggested guidelines and examples for sizing normal velocities in different applications are listed in Table 19, Table 20, and Table 21. Operation outside these guidelines may also give acceptable performance.

### TABLE 19. Sizing Guidelines

Application	Velocity Range (ft/s)	Velocity Range (m/s)
Normal Service	2–20	0.6–6.1
Abrasive Slurries	3–10	0.9–3.1
Non-Abrasive Slurries	5–15	1.5–4.6

To convert flow rate to velocity, use the appropriate factor listed in Table 19 and the following equation:

Velocity = 
$$\frac{Flow Rate}{Factor}$$

### Example: SI Units

Magmeter Size: 100 mm (factor from Table 20 = 492.0) Normal Flow Rate: 800 L/min

Velocity = 
$$\frac{800 \text{ (L/min)}}{492.0}$$

Velocity = 1.7 m/s

### Example: English Units

Magmeter Size: 4 inch (factor from Table 20 = 39.679) Normal Flow Rate: 300 GPM

Velocity =	<u>300 (gpm)</u>
	39.679

Velocity = 7.56 ft/s

TABLE 20. Line Size vs. Co	onversion Factor
----------------------------	------------------

Nominal Line Size Inches (mm)	Gallons Per Minute Factor	Liters Per Minute Factor
0.15 (4)	0.055	0.683

### **Upstream/Downstream Piping Length**

To ensure specification accuracy over widely varying process conditions, install the flowtube with a minimum of five straight pipe diameters upstream and two straight pipe diameters downstream from the electrode plane. See Figure 10. This procedure should adequately allow for disturbances created by elbows, valves, and reducers.

FIGURE 10. Upstream and Downstream Straight Pipe Diameters

### **Flowtube Grounding**

A reliable ground path is required between the flowtube and the process fluid. Optional grounding rings, grounding electrodes, and lining protectors are available with 8700 Series flowtubes to ensure proper grounding. See Table 22 and Table 23.

### TABLE 22. Grounding Options

Grounding Options	General Characteristics
No Grounding Options (grounding straps)	<ul> <li>Acceptable for conductive unlined pipe</li> <li>Grounding straps provided by Rosemount Inc.</li> </ul>
Grounding Electrode	<ul> <li>Same material as measurement electrodes</li> <li>Sufficient grounding option when process fluid conductivity is greater than 100 microsiemens/cm</li> <li>Not recommended in electrolysis or galvanic corrosion applications</li> </ul>
Grounding Rings	<ul> <li>Low conductivity process fluids</li> <li>Cathodic or electrolysis applications that may have stray currents in or around the process</li> <li>Variety of materials for process fluid compatibility</li> </ul>
Lining Protectors	<ul> <li>Protects upstream edge of flowtube from abrasive fluids</li> <li>Permanently installed on flowtube</li> <li>Protects liner material from over torquing of flange bolts</li> <li>Provides ground path and eliminates need for grounding ring or grounding electrode</li> </ul>

### TABLE 23. Grounding Installation

	Grounding Options				
Type of Pipe	No Grounding Options	Grounding Rings	Grounding Electrodes	Lining Protectors	
Conductive Unlined Pipe	Acceptable	Not Required	Not Required	Acceptable	
Conductive Lined Pipe	Not Acceptable	Acceptable	Acceptable	Acceptable	
Non-Conductive Pipe	Not Acceptable	Acceptable	Acceptable	Acceptable	

## **Material Selection**

Several liner types, electrode materials, and electrode types are available on Rosemount Magnetic Flowtubes to ensure compatibility with virtually any application. See Table 24 for information on liner types, Table 25 for information on electrode materials, and Table 26 for information on electrode types. Other material options not mentioned here are available. Contact your local sales representative for material selection. For further guidance on selecting materials, refer to the Magnetic Flowmeter Material Selection Guide located on Rosemount.com (document number 00816-0100-3033).

### TABLE 24. Lining Material

Lining Material	General Characteristics
PFA	<ul> <li>Highly chemical-resistant</li> <li>Excellent high temperature capabilities</li> </ul>
Teflon (PTFE)	<ul> <li>Highly chemical-resistant</li> <li>Excellent high temperature capabilities</li> </ul>
Tefzel (ETFE)	<ul> <li>Highly chemical-resistant</li> <li>Better abrasion resistance than Teflon</li> </ul>
Polyurethane	<ul><li>Excellent abrasion resistance</li><li>Limited chemical resistance</li></ul>
Neoprene	<ul><li>Very good abrasion resistance</li><li>Better chemical resistance than polyurethane</li></ul>
Linatex Rubber	<ul> <li>Very good abrasion resistance</li> <li>Limited chemical resistance especially in acids</li> <li>Softer material than polyurethane and neoprene</li> </ul>

#### TABLE 25. Electrode Material

Electrode Material	General Characteristics
316L Stainless Steel	<ul> <li>Good corrosion resistance</li> <li>Good abrasion resistance</li> <li>Not recommended for sulfuric or hydrochloric acids</li> </ul>
Hastelloy C-276	<ul> <li>Better corrosion resistance</li> <li>High strength</li> <li>Good in slurry applications</li> <li>Effective in oxidizing fluids</li> </ul>
Tantalum	<ul> <li>Better chemical resistance</li> <li>Not recommended for hydrofluoric acid, fluosilic acid, or sodium hydroxide</li> </ul>
90% Platinum - 10% Iridium	<ul> <li>Best chemical resistance</li> <li>Expensive material</li> <li>Not recommended for aquaregia</li> </ul>
Titanium	<ul> <li>Better chemical resistance</li> <li>Better abrasion resistance</li> <li>Good for sea water applications</li> <li>Not recommended for hydrofluoric or sulfuric acid</li> </ul>

### TABLE 26. Electrode Type

Electrode Type	General Characteristics
Standard Measurement	<ul><li>Costs least</li><li>Good for most applications</li></ul>
Bulletnose Electrodes	<ul> <li>Slightly more expensive</li> <li>Best option for coating processes</li> </ul>
Removable Electrode	<ul> <li>Most expensive</li> <li>Better than standard electrode for coating processes</li> </ul>

## **Ordering Information**

(1) Only available with Rosemount 8711 Integral Mount flowtube

(2) Not available with certain hazardous location certifications. Contact a Rosemount representative for details.

### **ROSEMOUNT 8705 ORDERING INFORMATION**

Code	Product Description	Availability
8705	Magnetic Flowmeter Flowtube	•
Code	Lining Material	
A	PFA	•
Т	Teflon (PTFE)	•
F	Tefzel (ETFE)	•
Р	Polyurethane	•
N	Neoprene	•
L	Linatex natural rubber	•
Other lining	materials available upon request. Consult factory. For availability by Line Size; see chart below	•
Code	Electrode Material / Electrode Type	
	Two Measurement Electrodes	
SA	316L Stainless Steel	•
HA	Hastelloy C-276	•
TA	Tantalum	•
PA	90% Platinum—10% Iridium	•
NA	Titanium	•
	Two Measurement Electrodes + Third Grounding Electrode (Not available with W3 on electrode housing configuration on 8" (200 mm) and under line sizes.)	
SE	316L Stainless Steel	•
HE	Hastelloy C-276	•
TE	Tantalum	•
PE	90% Platinum—10% Iridium	•
NE	Titanium	•
	Two Bulletnose Measurement Electrodes (Available in 2-inch (50 mm) and larger sizes only)	
SB	316L Stainless Steel	•
HB	Hastellov C-276	•
	Two Removable Measurement Electrodes (Available in 2-inch (50 mm) and larger sizes only); requires W3 option	
SR	316L Stainless Steel	•
HR	Hastelloy C-276	•

Other electrode materials and types available upon request. Consult factory.

Code	Flange Material, Type, and Rating	Availability
C1	Carbon Steel, ASME B16.5 (ANSI) Class 150 (30- and 36-inch AWWA C207 Table 3 Class D Flat Face)	•
C2	Carbon Steel, MSS SP44 Class 150 (30-inch [750 mm] only)	•
C3	Carbon Steel, ASME B16.5 (ANSI) Class 300	•
C6	Carbon Steel, ASME B16.5 (ANSI) Class 600 <sup>(1)</sup>	•
	(maximum pressure: 1000 psig; available in 0.5- through 10-inch [15 through 250 mm])	
C7	Carbon Steel, ASME B16.5 (ANSI) Class 600 <sup>(2)</sup>	•
	(with lining material codes P, N, and L only; available in 1- through 8-inch [25 through 200 mm])	
C9	Carbon Steel, ASME B16.5 (ANSI) Class 900 (2) (3)	•
61	(With lining material codes, P, N, L only, available in 1- through 8- [25 through 200mm])	
31	(30- and 36-inch AWWA C207 Table 3 Class D Flat Face)	•
S2	304 Stainless Steel MSS SP44 Class 150 (30- through 36-inch [750 through 900 mm] only)	•
S3	304 Stainless Steel, ASME B16.5 (ANSI) Class 300	•
S6	304 Stainless Steel, ASME B16.5 (ANSI) Class 600 <sup>(1)</sup>	•
	(maximum pressure: 1000 psig; available in 0.5- through 10-inch [15 through 250 mm])	
S7	304 Stainless Steel, ASME B16.5 (ANSI) Class 600 <sup>(2)</sup>	•
	(lining material codes P, N, and L only; available in 1- through 8-inch [25 through 200 mm])	
S9	304 Stainless Steel, ASME B16.5 (ANSI) Class 900 <sup>(2) (3)</sup>	•
	(with lining material codes, P, N, L only, available in 1- through 8- [25 through 200mm])	
P1	316 Stainless Steel, ASME B16.5 (ANSI) Class 150	•
50	(1/2- and 24-inch AWWA C207 Table 2 Class D Flat Face), pipe and flange	
P3	316 Stainless Steel, ASME B16.5 (ANSI) Class 300, pipe and flange	•
CD	Carbon Steel, DIN PN 10 (not available for flange sizes 15 to 150 mm)	•
CE	Carbon Steel, DIN PN 16 (not available for flange sizes 15 to 80 mm)	•
CH	Carbon Steel, DIN PN 25 (not available for flange sizes 75 to 900 mm)	•
CK	Carbon Steel, DIN FN 40 (not available for indige sizes $750$ to $900$ mm) <sup>(4)</sup>	•
CL	Carbon Steel, AS2129 Table E (available flange sizes 15 to 900 mm) $^{(4)}$	•
SD	Stainless Steel, DIN PN 10 (not available for flange sizes 15 to 150 mm)	•
SE	Stainless Steel, DIN PN 16 (not available for flange sizes 15 to 80 mm)	•
SE	Stainless Steel, DIN PN 25 (not available for flange sizes 15 to 150 mm)	•
SH	Stainless Steel, DIN PN 40 (not available for flange sizes 750 to 900 mm)	•
Other flange	e materials, types, and ratings available upon request. Consult factory.	
Code	Electrode Housing Configuration	
W/O	Sealed welded housing	•
W1	Sealed, welded housing with pressure relief	•
W3	Sealed, welded housing with separate electrode compartments	•
Code	Product Certifications	
NO	Factory Mutual (FM) Class I. Division 2 Approval for nonflammable fluids:	•
110	Canadian Standards Association (CSA) Class I. Division 2 Approval.	
	CE Marking	
NA	No Hazardous Area Approval; CE Marking	•
N5	Factory Mutual (FM) Class I, Division 2 Approval (with intrinsically safe electrode)	•
E1 <sup>(5)</sup>	ATEX EEx e ia IIC T3T6, Increased Safety Approval (with intrinsically safe electrode)	•
KD	ATEX EEx e ia IIC T3T6, Increased Safety Approval (with intrinsically safe electrode)	•
N1	ATEX EEx nA [L] IIC non-incendive Type n Approval	•

### **Product Data Sheet**

00813-0100-4727, Rev NB Catalog 2006 - 2007

Code	Options Continued	
	Optional Grounding Rings <sup>(6)</sup>	
G1	316L SST Grounding Rings	•
G2	Hastelloy C-276 Grounding Rings (0.5- through 12-inch (15 through 300 mm) flowtube line sizes)	•
G3	Titanium Grounding Rings (0.5- through 12-inch (15 through 300 mm) flowtube line sizes)	•
G4	Tantalum Grounding Rings (0.5- through 8-inch (15 through 200 mm) flowtube line sizes)	•
G5	Single 316L SST Grounding Ring	•
G6	Single Hastelloy C-276 Grounding Ring (0.5- through 12-inch (15 through 300 mm) flowtube line sizes)	•
G7	Single Titanium Grounding Ring (0.5- through 12-inch (15 through 300 mm) flowtube line sizes)	•
G8	Single Tantalum Grounding Ring (0.5- through 8-inch (15 through 200 mm) flowtube line sizes)	•
	Optional Lining Protectors <sup>(6)</sup>	
L1	316L SST Lining Protectors	•
L2	Hastelloy C-276 Lining Protectors (0.5- to 12-inch (15 to 300 mm) flowtube line sizes)	•
L3	Titanium Lining Protectors (0.5- to 12-inch (15 to 300 mm) flowtube line sizes)	•
	Optional Sanitary Connections <sup>(7)</sup>	
A3	Sanitary 3-A (0.5- to 3-inch (15 to 80 mm) sizes only);	•
	ASME B16.5 (ANSI) Class 150 to Tri-Clamp Adapter	
A4	Sanitary 3-A (2.5-inch (64 mm) sizes only); ASME B16.5 (ANSI) Class 150 to Tri-Clamp Adapter	•
A5	Cherry Burrell Sanitary I-line (0.5- to 3-inch (15 to 80 mm) sizes only);	•
	ASME B16.5 (ANSI) Class 150 to I-line Adapter	
A6	Cherry Burrell Sanitary I-line (2.5-inch (64 mm) sizes only);	•
	ASME B16.5 (ANSI) Class 150 to I-Line Adapter

#### Typical Model Number: 8705 T SA 040 C1 WU NU

(1) Electrode options limited to two measurement electrodes or two measurement electrodes + third grounding electrode.

(2) Electrode options limited to two measurement electrodes or two measurement electrodes only.

- (3) Lining Protectors not available.
- (4) Option code limited to Liner material T, P, or F; cannot be ordered with ground rings, lining protectors AX or HX options.
- (5) For use with E1 / K1 transmitter.
- (6) Grounding Rings and Lining Protectors provide the same fluid grounding function. Lining Protectors available in Teflon (PTFE) and Tefzel (ETFE) only.
- (7) Sealed, welded housing (Option Code W0 or W1) required. Only available with Teflon (PTFE) lining material (Option Code T) and 316L Stainless Steel, Hastelloy C-276, and 90% Platinum-10% Iridium electrode material (Option Codes S, H, and P). Not available with integral mount Rosemount 8712 transmitter. Sanitary connection codes A4 and A6 only available in line size code 020.
- (8) Option Code must be ordered for both flowtube and transmitter.
- (9) Order as a separate line item.
- (10) Order by placing model code in manufacturing notes on sales order. This code does not belong in the model string.
- (11) Order as a separate line item, this code does not belong in the model string.

Code	Options	
	Optional Grounding Rings <sup>(3)</sup>	
G1	316L SST Grounding Rings	•
G2	Hastellov C-276 Grounding Rings (3- through 12-inch (80 through 300 mm) flowtube line sizes)	•
G3	Titanium Grounding Rings (3- through 12-inch (80 through 300 mm) flowtube line sizes)	•
G4	Tantalum Grounding Rings (3- through 8-inch (80 through 200 mm) flowtube line sizes)	•
G5	Single 316L SST Grounding Ring	•
G6	Single Hastellov C-276 Grounding Ring (3- through 12-inch (80 through 300 mm) flowtube line sizes)	•
G7	Single Titanium Grounding Ring (3- through 12-inch (80 through 300 mm) flowtube line sizes)	•
G8	Single Tantalum Grounding Ring (3- through 8-inch (80 through 200 mm) flowtube line sizes)	•
	Optional Lining Protectors <sup>(3)</sup>	
L1	316L SST Lining Protectors	
L2	Hastelloy C-276 Lining Protectors (3- through 12-inch (80 through 300 mm) flowtube line sizes)	•
L3	Titanium Lining Protectors (3- through 12-inch (80 through 300 mm) flowtube line sizes)	•
	Other Options	
B3	Integral Mount with Rosemount 8732C (8742C) transmitter	•
D1	High Accuracy Calibration [0.25% of rate from 3-30 ft/s (0.9-10 m/s)] matched flowtube and transmitter system <sup>(4)</sup>	•
D2	Dual Flowtube Calibration Numbers on Rosemount 8712H and 8712C Transmitters	•
DT	Heavy Duty Tagging	•
H1	Rosemount 8703 flowtube lay length (available for 3- through 4-inch (80 through 100 mm) line sizes); spool piece: ASME B16.5 (ANSI) Class 150 or Class 300 flange and 304 stainless steel pipe	•
H2	Rosemount 8703 flowtube lay length (available for 3- through 16-inch (80 through 400 mm) line sizes	•
H5	Foxboro <sup>®</sup> Model 2800 lay length (available for 3.0 through 18 inch (80 through 450mm line sizes)) spool piece: ASME B16.5 (ANSI) Class 150 flange and 304 stainless steel pipe.	•
H7	ABB Fischer & Porter <sup>®</sup> Model CopaX and MagX lay length (available for 0.5 through 12in (15 through 3000 mm line sizes)) spool piece: ASME B16.5 (ANSI) Class 150 flange and 304 stainless steel pipe or teflon spacer.	•
J1	CM20 Conduit Adapter	•
J2	CM13.5 Conduit Adapter	•
Q4	Inspection Certificate-Calibration Data, ISO 10474 3.1B, (Flow Cal., 1-10ft/s [0.3-3 m/s])	•
Q5	Hydrostatic Testing Certification	•
Q8	Material Traceability Certificate per DIN 3.1 B	•
Q9	Material Traceability Certificate (electrodes only) per DIN 3.1B 337	•
Q15	NACE Certification <sup>(5)</sup>	•
Q66	Welding Procedure Qualification Record Documentation	•
Q67	Welder Performance Qualification Record Documentation	•
Q68	Welding Procedure Specification Documentation	•
Q70	Inspection Certificate Weld Examination, ISO 10474 3.1B	
	- 3- to 12-inch [80-300 mm] flowtube line sizes	•
	- 14- to 18-inch [350-450 mm] flowtube line sizes	•
		•
Typical Mode	el Number: 8707 T SA 040 C1 W0 N0	

(1) Electrode options limited to two Hastelloy C-276 or two 90% Platinum-10% Iridium electrode material. Cannot be ordered with 300# lining protectors or Quality Certificates Q8, Q9, Q66, Q67, Q68, or Q70.

(2) Available for 10 inch and larger line sizes only.

(3) Grounding Rings and Lining Protectors provide the same fluid grounding function. Lining Protectors available with Teflon (PTFE) and Tefzel (ETFE) lining material only.

(4) Option Code must be ordered for both flowtube and transmitter.

(5) Order as a separate line item.

### **ROSEMOUNT 8711 ORDERING INFORMATION**

Model	Product Description	Availability
8711	Magnetic Flowmeter Flowtube (flangeless construction)	•
Code	Lining Material	
Т	Tefzel (ETFE)	•
S	Teflon (PTFE) (not available with 0.15 and 0.30 inch [4 and 8 mm] line sizes)	•
Code	Electrode Material / Electrode Type	
	Two Measurement Electrodes	
SA	316L Stainless Steel	•
HA	Hastelloy C-276	•
TA	Tantalum	•
PA	90% Platinum—10% Iridium	•
NA	Titanium	•
	Two Measurement Electrodes + Third Grounding Electrode	
SE	316L Stainless Steel	•
HE	Hastelloy C-276	•
TE	Tantalum	•
PE	90% Platinum—10% Iridium	•
NE	Titanium	•
	Two Bulletnose Measurement Electrodes (Available in 2-inch (50 mm) and larger line sizes only)	
SB	316L Stainless Steel	•
HB	Hastelloy C-276	•
Code	Line Size	
15F	0.15 inch (4 mm) (not available with Teflon (PTFE) lining material)	•
30F	0.30 inch (8 mm) (not available with Teflon (PTFE) lining material)	•
005	½ inch (15 mm)	•
010	1inch (25 mm)	•
015	1½ inch (40mm)	•
020	2 inch (50mm)	•
030	3 inch (80 mm)	•
040	4 inch (100 mm)	•
060	6 inch (150 mm)	•
080	8 inch (200 mm)	•
Code	Transmitter Mounting Configuration	
R	Remote	•
U	Integral, mounted to Rosemount 8732C/8742C transmitter	•

Typical Model Number: 8721 A S A 020 U A 1 N0		

(1) Tri-Clamp specification per BPE-2002

(2) IDF Specification per BS4825 Part 4

(3) EHEDG Document 8 requires mechanical compression limiting, provided by Compression - limiting gaskets for line sizes 1-4 inch only.

### **ROSEMOUNT 8714 DQ4 ORDERING INFORMATION**

Model	Description	Availability
8714DQ4	Reference Calibration Standard	•

### Tagging

The flowtube and transmitter will be tagged, at no charge, in accordance with customer requirements.

Transmitter tag character height is 0.125 in. (3.18 mm). Flowtube tag: 40 character maximum. Transmitter tag: see Configuration Data Sheet for character maximum.

### **Ordering Procedure**

To order, select the desired flowtube and/or transmitter by specifying model codes from the ordering table.

For remote transmitter applications, note the cable specification requirements.

Flowtubes and transmitters must be selected from Product Data Sheet 00813-0100-4727.

### **Standard Configuration**

Unless the Configuration Data Sheet is completed,<br/>the transmitter will be shipped as follows:<br/>Engineering Units:Engineering Units:ft/sec4 mA (1 V dc):020 mA (5 V dc):30Tube Size:3-inchEmpty Pipe:Off

Flowtube Calibration Number: 1000005010000000

The Rosemount 8732C and the 8742C Transmitter are factory-calibrated with the attached flowtube size and appropriate calibration number.

# Cable Requirements for Remote Transmitters

Description	Length	P/N
Signal Cable (20 AWG)	ft	08712-0061-0001
Belden 8762, Alpha 2411 equivalent	m	08712-0061-0003
Coil Drive Cable	ft	08712-0060-0001
(14 AWG) Belden 8720, Alpha 2442 equivalent	m	08712-0060-0003
Combination Signal and	ft	08712-0752-0001
Coil Drive Cable (18 AWG) <sup>(1)</sup>	m	08712-0752-0003

(1) Combination signal and coil drive cable is not recommended for high-signal magmeter system. For remote mount installations, combination signal and coil drive cable should be limited to less than 100 ft (30 m).

Remote transmitter installations require equal lengths of signal and coil drive cables. Integrally mounted transmitters are factory wired and do not require interconnecting cables.

Lengths from 5 to 1,000 feet (1.5 to 300 meters) may be specified, and will be shipped with the flowtube. Cable longer than 100 feet (30 meters) is not recommended for high-signal systems.

### Custom Configuration (Option Code C1)

If Option Code C1 is ordered, the Configuration Data Sheet (CDS) must be submitted at the time of order.
