General information

Introduction
The F113 is a versatile flow rate indicator and totalizer with continuous flow rate monitoring feature. It offers the facility to set two low flow rate and two high flow rate alarm values. If desired, a delay function can be set up to allow for an incorrect flow rate for a certain period of time. Up to four outputs are available to transmit the alarm condition and/or the accumulated total. A wide selection of options further enhance this model’s capabilities, including Intrinsically Safe and full Modbus communication.

Display
The display has large 17mm (0.67") and 8mm (0.31") digits which can be set to show flow rate, totals and alarm values. The alarm values can be pass-code protected. On-screen engineering units are easily configured from a comprehensive selection. The accumulated total can register up to 11 digits and is backed-up in EEPROM memory every minute.

Configuration
All configuration settings are accessed via a simple operator menu which can be pass-code protected. Each setting is clearly indicated with an alphanumerical description, therefore avoiding confusing abbreviations and baffling codes. Once familiar with one F-series product, you will be able to program all models in the series without a manual. All settings are safely stored in EEPROM memory in the event of sudden power failure.

Analog output signal
The flow rate is re-transmitted with the (04 - 20mA or 0 - 10V DC output signal. The output signal is updated ten times per second with a filter function being available to smoothen out the signal if desired. The output value is user defined in relation to the flow rate, e.g. 4mA equals to 15L/Hr and 20mA equals to 2000L/Hr. The output signal can be passive, active or isolated where the passive output type will loop power the F113 as well.

Pulse output
The scaleable pulse output, reflects the count on the accumulated display. The pulse length is user defined and the maximum output frequency is 64Hz.

Signal input
The F113 will accept most pulse and analog input signals for flow or mass flow measurement. The input signal type can be selected by the user in the configuration menu without having to adjust any sensitive mechanical dip-switches or jumpers. The analog input versions are even available as 4-20mA input loop powered displays.

Communication
All process data and settings can be read and modified manually or through the Modbus communication link (RS232 / RS485). Full Modbus functionality remains available for the Intrinsically Safe version (TTL).

Hazardous areas
For hazardous area applications, this model has been ATEX certified Intrinsically Safe II 1 GD Ex ia IIB / IIC T4 T100°C with an allowed operational temperature of -30°C to +70°C (-22°F to +158°F). A flame proof enclosure is also available with the rating II 2 GD Ex d IIB T5.

Enclosures
Various types of enclosures can be selected, all ATEX approved. As standard the F113 is supplied in a GRP panel mount enclosure, which can be converted to an IP67 / NEMA 4X GRP field mount enclosure by the addition of a back case. Most popular is our rugged aluminum field mount enclosure with IP67 / NEMA 4X rating. Both European or U.S. cable gland entry threads are available.
